Woodlore LLC Portable Saw Mill Services

We can custom cut your logs, or resaw your lumber to your specifications on one of our two portable saw mills. We can mill at your site or ours.

Wood-Mizer LT40:
Specs for bandsaw: 36″ diameter log with 24″ wide throat capacity. We can saw logs up to 20′ long.

Custom built portable saw mill slabber:
Specs for slab saw: 55” diameter log. We can saw logs up to 16′ long.

Portable saw mill services (either sawmill): $90/hour, where time starts upon arriving at location of logs, and time stops upon completion of milling last log.

We highly recommend that you use a metal detector on your logs before we mill, because if we hit metal while cutting your logs there is an additional $30 charge per incident to replace a damaged blade.

If we are trimming your logs to fit on the mill and hit metal with our chainsaw, then a chain fee may apply at the current rate of chain per length damaged.

If we need to bring our skid steer to move logs, additional fees of $20/hour apply.

Long-distance clients: If the logs are located more than 50 miles away from our place of business, additional fees apply as follows:

Mileage fee: $0.75/mile. Note that mileage is calculated as a distance from our shop to your site, and is not doubled for round-trip.

Hotel fee: $125/night, as required.
